

Truck Stop & Welcome Center: Canopy

Spring 2019 / ARCH 3032 / Memphis, TN, USA / Prof. Andrew Liles

This Integrated Studio project is a reimagining of the American truck stop and welcome center typologies on a constrained site in suburban Memphis, Tennessee. The typical fueling station canopy is used as the base for the building massing, freeing up ground space for vehicle circulation, with the canopy structure meeting the ground at the central focal point where truckers and other visitors come together.

CANOPY LOBBY PERSPECTIVE
